Contact Person: Kim Rudningen
2700 Lincoln Ave SE
Sidney, MT 59270

Distance Nearest Occupied Building: 1000 Feet **Release Contained:** Yes

Type of Incident: Condensate release from flare

Description of Released Contaminant: Natural gas condensates/slop water

Volume Spilled: 4.00 barrels **Ag Related:** No

EPA Extremely Hazardous Substance: No **Reported to NRC:** No

Cause of Incident:

Due to liquids building up in the inlet, when the operator when to blow down one of the units, the liquids got into the flare line and were release through the flare tip.

Risk Evaluation:

There are no immediate risks or health hazards associated with this release.

of Fatalities: **# of Injuries:** **Affected Medium:** 03 - soil

Potential Environmental Impacts:

There are no effects to surface water. The impact remains on the vegetation and soil just south of the Judson compressor station. There are no other adverse effects expected from this release.

Action Taken or Planned:

The blowdown was immediately stopped. Approximately 4 barrels of condensate sprayed out of the flare tip and was carried by the wind south over the road and a was deposited onto a grassy area approximately 50ft wide and 75 yards long. A cleanup crew has been contacted and the contaminated area will be scraped to remove all contaminated dirt and vegetation. Confirmation samples will be taken to confirm that all of the contaminated materials have been removed.

Wastes Disposal Location: The wastes will be disposed of in a permitted landfill.
